Khidderpore, Kolkatta

Total Sq ft: 750 Sqm.

ARDEX ENDURA PRODUCTS

- WA 98
- BUTYNOL 600 (EMB 600)
- SU 10

Challenge:

The existing terrace was being treated with waterproofing product and tiling, using a reputed make but still the terrace leaked severely. This became a perennial problem for the client and things worsened further leading to delay in routine activities of the factory. Unable to find a right solution

Solution:

After site visit and understanding the root causes of problems ARDEX ENDURA team suggested a highly durable long lasting waterproofing solution with BUTYNOL 600 (EMB 600), flexible composite roofing membrane with Weld-Tech Technology along with SU10, Polyurethane sealant. The uniqueness of this innovative waterproofing solution is that, the existing terrace not at all disturbed while laying the BUTYNOL 600 (EMB 600). This job was completed as per customer schedule. The total roof area treated with BUTYNOL 600 (EMB 600) is 750 Sqm.

Unique Elements:

This is the first opportunity for ARDEX ENDURA to partner with ITC Group in providing waterproofing solution. We are happy to inform ARDEX ENDURA is an approved brand and registered Vendor in ITC group.

Our Sales and Central Technical Services team took initiative to understand the site requirements and suggested the best solution without disturbing or removing the existing layer of roof terrace.
