

CASE STUDY

KIRLOSKAR FERROUS INDUSTRIES LIMITED

HOSPET

ARDEX ENDURA PRODUCTS:

Featured....The products that are used in this project are as follows:-

- R 70 P
- R 90 P

Problem

These trolleys are used with MS wheels since they are moved near to hot machineries and furnaces. These trolleys carry up to 0.5 to 0.6 ton to carry moulds. Since the surface was not even these moulds fallen down during movement that caused a lot of damages to them.

Solution

The mock was carried out at a selected location near washing area where the trolleys and people move frequently. We installed R 90 P (Grey color) at 6mm thickness with scratch coat of R 70 P

Finally, after a testing period for more than 18 months, they called us for installing few damaged area where they find difficulty to move their trolleys. We happen to execute around 300-350 SqM area with ARDEX ENDURA supervision during Sep 2009.
