

CASE STUDY

Orchid Woods

Bangalore

Division: Waterproofing & CRA

ARDEX ENDURA PRODUCTS:

- EP 320
- WPM 300
- WPM 002

Challenge: The biggest challenge was to convince and convert the client to use products of ARDEX Endura. The client was buying products from a competitor and the competitor had already bagged the waterproofing of basement and wet areas and was already doing the job.

Situation

The project was for waterproofing the podium area. The client had gained confidence in ARDEX Endura after its work in another project of theirs Lakeview. Repeated trails and follow ups enabled us to bag the project of waterproofing the podium. The area of waterproofing was about 4600 sqm.

Solution:

The solution provided to the client was to repair all cracks with a solvent-free, epoxy resin crack injection system, EP 320, and then waterproof the podium with a system of water based epoxy primer, WPM 300, of one coat and Two Component Waterproofing Membrane.

Unique Elements: The system recommendations were made by ARDEX ENDURA and the same is well demonstrated to the client during the initial discussion. Later was executed by our authorized applicator M/s. Alpha Enterprises. The application work carried out with utmost care with constant inputs from our CSTD team member.
